

Logistics, Planning, and Analysis

ICF International is the primary consultant for the Air Force's fast-response deployment and logistics support operations, on which lives and critical missions depend.

The gravest scenarios for natural disasters, health emergencies, or terrorist attacks in the United States could confront Americans with massive logistical challenges on the scale of the Hurricane Katrina aftermath.

Emergency responders could face unprecedented requirements to evacuate, inoculate, treat, feed, and shelter tens of thousands of victims, with little or no warning. Although the public and elected leaders have demanding expectations, responsible government agencies are still striving to develop and demonstrate their capability to respond effectively to such threats.

ICF Approach

ICF International provides comprehensive solutions to complex, large-scale logistics planning and management requirements. As a leading service provider to the Departments of Homeland Security and Defense, we are uniquely positioned to apply tested military logistics solutions to the expanding challenges of domestic emergency preparation. ICF is the primary consultant for the Air Force's fast-response deployment and logistics support operations, on which lives and critical missions depend. Our staff is exceptionally equipped to provide this expertise for homeland emergency preparedness.

ICF offers more than 30 years of experience in developing systems for designing, building, and testing operating plans, state-of-the-art technology methods, and proprietary tools that enable responders to identify resources from diverse suppliers. We specialize in helping clients analyze management relationships to coordinate operational responsibilities and ensure effective information exchange among key constituencies.

An imperative in Homeland Security Presidential Directive 8 (HSPD-8) and the National Infrastructure Protection Plan (NIPP) is the need for all-hazards planning and preparation that pulls together resources of federal, state, and local governments with those of private-sector participants. Because the range of threats is broad and their nature unpredictable, emergency management plans must be comprehensive, flexible, and adaptable to new challenges.

ICF is a pivotal contractor in the development of HSPD-8 and NIPP. We have unmatched capabilities in advising government and private-sector clients in the new adaptive emergency planning and management environment. The hallmark of our client service is a commitment to end-to-end solutions that take projects from design and simulation through training, implementation and evaluative testing. We collaborate with clients as a trusted advisor when plans must be put into actions.

Featured Solutions

Strategic National Stockpile (SNS) Training Exercises

ICF supports state, county, and local agencies in developing and staging training exercises that evaluate state and local access to the SNS of vaccines and other medical emergency supplies that would be needed to respond to a pandemic disease outbreak.

Grants Management Program

In 2006, ICF won a 3-year contract from the State of Louisiana to administer “The Road Home” program, a housing grants management program providing assistance to victims of hurricanes Katrina and Rita. Our experts are working with the Louisiana Recovery Authority to support reimbursement to the owners of 123,000 damaged or destroyed homes.

Network-Centric Decision Making

ICF, Northrop Grumman Mission Systems, and GRACAR teamed to reengineer the Defense Department’s Joint Deployment Process, creating a network-centric decision methodology that optimizes the deployment and sustainment of forces in fast-response missions.

Sense and Respond Logistics (S&RL)

For the Department of Defense, ICF has developed the S&RL concept—the logistics component of a transformational command and control agent technology that uses network-centric operations to increase mission effectiveness. The component organizes and coordinates supply capabilities from multiple sources and is designed for rapid adaptation to changing environments and requirements.

Development of Security Exercise Evaluation Guides

ICF is developing the next generation of Homeland Security exercise evaluation guides, based on the Target Capabilities List process, that create the framework for testing and evaluating preparedness plans. We are a leader in helping clients design, conduct, and assess preparedness exercises, including plans for radiological, bioterrorism, pandemic, and natural disaster emergencies.

About ICF International

ICF International (NASDAQ: ICFI) partners with government and commercial clients to deliver consulting services and technology solutions in the energy, climate change, environment, transportation, social programs, health, defense, and emergency management markets. The firm combines passion for its work with industry expertise and innovative analytics to produce compelling results throughout the entire program life cycle, from analysis and design through implementation and improvement. Since 1969, ICF has been serving government at all levels, major corporations, and multilateral institutions. More than 3,000 employees serve these clients worldwide. ICF’s Web site is www.icfi.com.
